4E Alumni Walker Chan standing Guard at the Wocotrodoshopo

Alumni Corner

Guest Writer: Andrew Westerdale

Last Saturday was Walker's Cannytrophic Design Shareholder's Party (or Wocotrodoshopo). The party featured the Iron Curtain, some Color Kinetics, Blue Zombies, some classy flash trash and a 50 year old homeless man drinking out of a paper bag. Cannytrophic receptionist and warehouse occupant Walker Chan refused to comment on whether or not said homeless man actually lived in the warehouse. Towards the end of the night, said Walker Chan was on door guard duty (pictured) to ensure the safety of the warehouse. During this time, Tucker "Bowtie" Chan saw something particularly interesting in the plenum. The Weekly Awesome would like to thank Cannytrophic Design for the excellent party and wish them the best of luck as they break new grounds in treadmill technology.

Kulinary Korner

Tucker Chan

Legolas received a culinary surprise when he used a cup of "not flour" to make cranberry bread. The not flour container was labeled as such when a group of slugs attempted to make corn dogs, but used granulated sugar instead of flour. Recently, unbeknownst to Mr. Sterling, a local cruft filled the not flour container with salt. Mr. Sterling, full of hatred towards the world, left the brackish bread out with the label "cranberry sugar surprise" and threw away half of it to look like it was being eaten. After slugs caught on to the saline nature of the bread, the remnants were book returned, and now reside in the media lab.

On a similar note, Mr. Scarito hypothesized that the brownulated sugar was yeast. Extensive comparative flame test characterization by Mr. Chan refuted this hypothesis.

Culinary Corner

DaPBJ

Following yet another successful Fourth East FAC, the hall was left with an overabundance of bread crusts. There was only one thing to do with such a preponderance of doughy discards: bread pudding. First on the menu was peanut butter and jelly with extra jelly spooned onto the custard-creamed crusts. By the end of the following day the results had been well divided among 4E with the remainder sent up to 5th. Next in the process of puddingry was an apple-flavored bread pudding, complete with chunks of freshly picked deliciousness. An attempt was made at a rum sauce with which to top the apple delight, but it turned into a culinary catastrophe. In spite of the near-delicious disaster, the extremely palatable pudding was quickly devoured. Even after these two creations came to be, however, only 2/3 of the bread was used, leaving the rest to make yet another masterpiece of after meal desert.

Word of the Week

Nate Pallo

voluptuous - full of delight or pleasure to the senses; conducive to or arising from sensuous or sensual gratification

Printation

Nate Pallo

Thanks to Simone, Steven, TRchan, JoeM, SRD, et al., the hall has two new voluptuous printers. Juntonian-II, the laserjet, is in Goodale. You can print to it by printing to bemix.mit.edu:9100 or by following instructions on the slugwiki. EconoMode has been enabled, so it doesn't spew out toner. Enforcer-II, the color laserjet, is in Walcott.

Mailing Lists

Tucker Chan

MIT generously facilitates the creation of mailing lists, with a moira mailing list taking approximately 2 seconds to make. Many slugs have taken advantage of this, and now own triple digit numbers of mailing lists, such as jescrow, pdonlan, d0nlan, d0n1an, manifold, etc. Rumor has it that some slugs have averaged more than one list creation a day.

Fred Fest 08

Nate Pallo

The first annual Fred Fest will be held this Saturday in the EC Courtyard. Thanks to EC-ConcertComm and EC-JoeGComm (`thejoegclub@mit.edu`), Fred Fest '08 will feature 4 awesome bands and perhaps another one of unknown quality to open at 2. There will also be refreshments, including FREE cocoa and FREE hot cider, as well as wings sold by Wings Over Somerville - the creators of the 20lb Wingenluften. EC-JoeGComm has also equipped the courtyard with over 25KW of power to enable the WMBR Live sound system and the lighting from e33 for the stage.

Swirly Glasses at his finest!

Local Man Makes Headlines

Staff

It seems that a 4th East resident was capable of amazing feats of formatting on his word processing machine. Headlines, a type of prose meant to summarize a piece of journalism and entice readers, have long been the Everest of formatting. Harvard students have been working on the solution to the headline problem since the institution was founded for this purpose in 1795. But, like in so many other fields, MIT students have bested Harvard at their own game. "Yep, I made them headlines, yes indeedy-do I did," says proud typist Nate Pallo of his handiwork. The headlines will be on display in 4th east until November, when they will be transported to their permanent home in the Louvre. Don't miss your only chance to see these priceless artifacts before they leave the states forever.

Ask Dr. Dice

Dr. Dice

Continuing our theme, we present Dr. Dice–Obama edition:

Q: Senator Obama, what are your policies on...
A: CHANGE!

Q: But what about...
A: Change, change change change, change. Change change change change change? Change, change change.

Q: That doesn't address...
A: Change change [**ED: I think you get the point...**]

If you have a question for the doctor, email `ask-dr-dice@mit.edu`.
